

PROFESSIONAL SUMMARY

As a driven and knowledgeable Computer Engineering student, I possess a solid foundation in technical concepts and principles. With a keen interest in technology and a passion for innovation, I have gained expertise in various programming languages, hardware design, and system analysis. Additionally, my strong communication and analytical abilities contribute to my aptitude for tackling complex engineering challenges. I am excited to align my aspirations with your esteemed organization, where I can flourish and grow with your invaluable support.

EDUCATION

Karabük University
B.S. in Computer Engineering

Organizations: IEEE Karabük University (2023-2024)
BTK Karabük University (2023-2025)

Karabük, TURKIYE
2021–2025

Karabük University
M.S. in Computer Engineering

Karabük, TURKIYE
2025- present

SKILLS

Programming Languages : Java, C, C#, JavaScript, Python

Mobile Development: React Native, Nativewind

Web Development: Flask, Django, HTML/CSS, React.js, Next.js, Node.js TypeScript, Bootstrap, Tailwind

Certificates Oracle Database SQL

Languages: Turkish (Native), English (Advanced), Spanish(Beginner)

GUI Development: C# WFA

Database Management: MySQL, MongoDB, SQLite

3D Modelling: Blender

WORK EXPERIENCE

BUSIWAPP

Jr. Full-Stack Web Developer

Konya, TURKIYE
December 2022 – June 2023

During this process, I learned about various technologies such as RabbitMQ, microservices and database modeling. Additionally, I improved my skills such as Python and React.js.

University of Florida

Internship(Remote), Computer Science Department

Gainesville, Florida, USA
December 2022 – Present

- Worked on multiple projects on developing RESTful API solutions using Python to provide seamless communication between client applications and server infrastructure.
- Designed and implemented endpoints for handling various HTTP methods (GET, POST, PUT, DELETE) to facilitate data retrieval, creation, modification, and deletion operations.
- Utilized Flask Python framework to build the REST API, ensuring efficient routing, request handling, and response generation.
- Optimized API performance by implementing efficient database queries, caching strategies, and response pagination, resulting in improved response times and scalability.

Truefeedback

Internship, Full-Stack Web Developer

Konya, TURKIYE
July 2023 – August 2023

Mentor: Kerem NORAS

- Utilized TypeScript and Next.js to build responsive and dynamic web applications
- Develop two projects focused on PormptPulse and Car Catalog projects that I covered on Projects session.

Tatar Kaya Teknoloji

Backend Developer

Karabük, Turkey
October 2024 – August 2025

During this process, I worked with Node.js on the backend and MongoDB for the database. I also worked on the RabbitMQ. I learned also AWS implementations like S3.

PROJECTS

Resume Matching System | [Github](#)

- Students often struggle to identify academic supervisors whose research aligns with their background and interests, due to limited visibility, manual selection, and keyword-based systems lacking contextual understanding.
- Developed a mobile-based advisor recommendation platform that semantically analyzes student resumes using OpenAI GPT APIs. Scraped and processed data from 20,000+ academic profiles using Puppeteer and Axios; stored and managed data via MongoDB and AWS S3. Built the frontend with React Native and backend with Node.js/Express, enabling dynamic AI-based advisor matching.
- Developed a mobile-based advisor recommendation platform that semantically analyzes student resumes using OpenAI GPT APIs. Scraped and processed data from 20,000+ academic profiles using Puppeteer and Axios; stored and managed data via MongoDB and AWS S3. Built the frontend with React Native and backend with Node.js/Express, enabling dynamic AI-based advisor matching.

Promptpulse Project | [Github](#) / [Truefeedback](#) [PromptPulse](#)

- There was a need for a platform where users could seamlessly create, share, and discover creative AI prompts.
- I developed PromptPulse, a web app featuring Google Authentication for user convenience. Users gained the ability to create, edit, and share AI prompts, fostering a community of creativity. The implementation of Next.js, NextAuth, and MongoDB ensured a secure and efficient platform for prompt exchange.
- PromptPulse successfully facilitated the creation and exchange of AI prompts, fostering a collaborative space for users. The integration of Google Authentication added an extra layer of security, and the use of Next.js and MongoDB ensured a responsive and reliable platform.

Car Catalog Website | [Github](#) / [Truefeedback](#) / [Car Catalog Website](#)

- I sought to enhance my API skills and create an aesthetically pleasing website centered around car information.
- The Car Catalog Website was developed, featuring server-side rendering and leveraging RapidAPI for real-time car information. The frontend design was carefully crafted, utilizing Next.js, TypeScript, and HeadlessUI. Previous commits showcased a transition from client-side to server-side rendering for optimal performance.
- The project showcased improved API proficiency, providing users with a visually appealing and responsive platform for exploring car information. The integration of server-side rendering and technologies like Next.js, TypeScript, and HeadlessUI ensured a seamless user experience.

E-Commerce API | [Github](#)

- Developing a comprehensive and secure API for an e-commerce platform that handles user registration, authentication, and various functionalities typical of e-commerce projects.
- I spearheaded the development of an E-Commerce API, integrating essential features such as user registration and login, secure JWT-based authentication via cookies, and role-based authorization. The project leveraged Node.js for the backend, MongoDB for the database, and the DocGen package for documentation to ensure a well-documented and maintainable codebase.
- The E-Commerce API provided a robust and secure foundation for e-commerce operations, enabling efficient user management and secure transactions. The role-based authorization ensured appropriate access controls, while comprehensive documentation facilitated easier maintenance and scalability of the project.
Technologies used include Node.js, MongoDB, JWT via cookies, role-based authorization, and DocGen for documentation.

Student Tracking Sytem | Github

- Educational environments lacked effective communication channels among students, teachers, and parents
- I conceptualized and developed a Student Tracking System, introducing user-specific profiles and dashboards for Parents, Students, and Teachers. Teachers gained the ability to create and manage classrooms, timetables, and student rosters. Furthermore, a blog feature resembling platforms like Medium was incorporated, allowing users (excluding parents) to create, read, and favorite blogs
- The project successfully bridged the communication gap in educational settings. Teachers could efficiently manage classrooms, track student progress, and foster a collaborative environment. The blog feature enriched user engagement, providing a versatile platform for sharing information and insights. Technologies employed include Django template language, Bootstrap, and SQLite.
